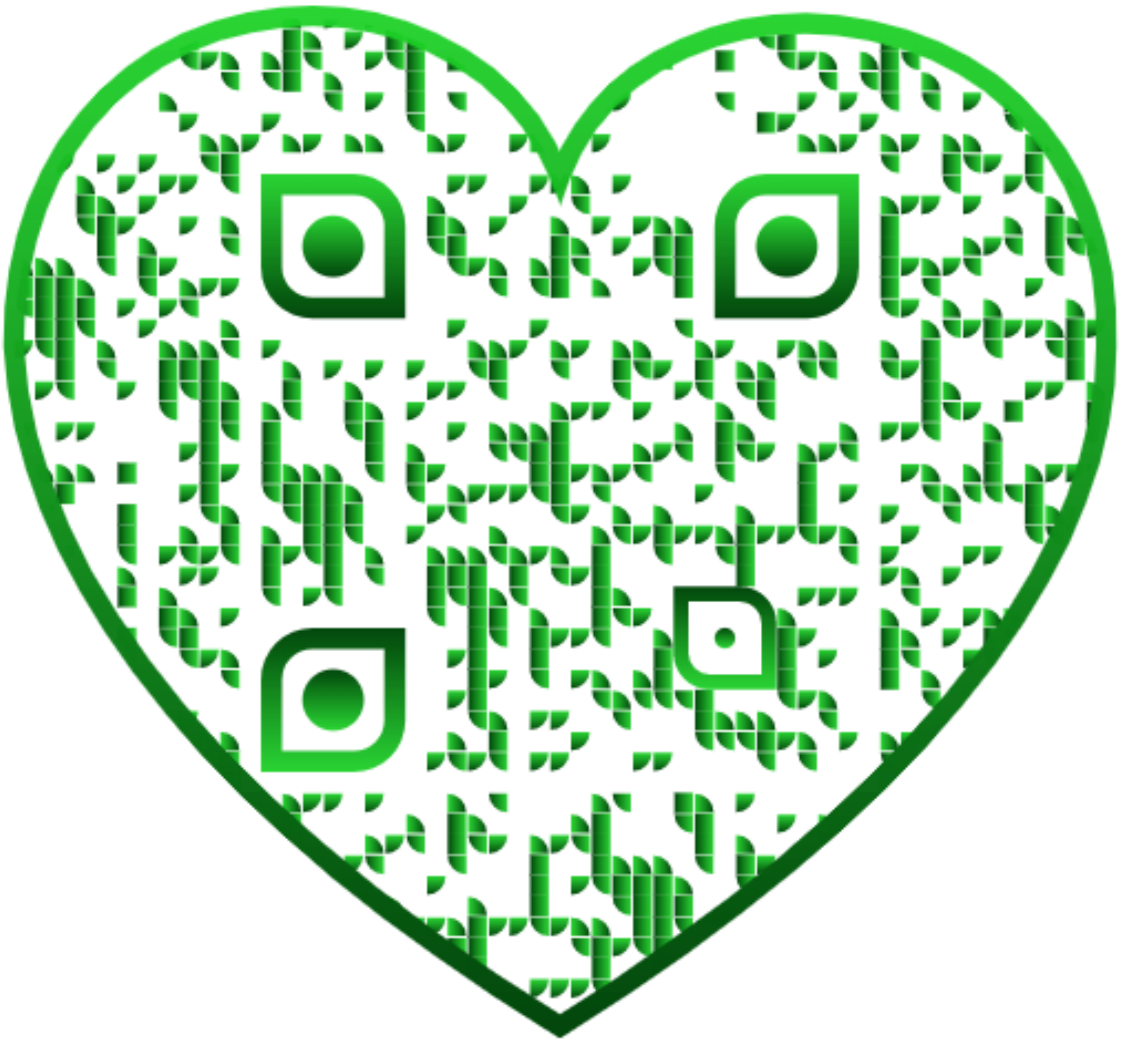
MPOX

Mpox (previously monkeypox) is a viral infection which can spread between people, mainly through close contact. It can cause a painful rash, enlarged lymph nodes and fever.



World Health Organization

MPOX SPREADS

* person-to-person, through touch, kissing, or sex, or by talking or breathing close to someone who has mpox,
* from infected animals, when hunting, skinning, or cooking them,
* from contaminated materials, such as sheets, towels, clothes or needles,
* during pregnancy, when the virus may be passed on to the unborn baby.

World Health Organization

SIGNS & SYMPTOMS

Symptoms of mpox are

* Rash which may last for 2–4 weeks
* Fever, headache, muscle aches, back pain, low energy and swollen glands (lymph nodes)
* The rash can affect the face, palms of the hands, soles of the feet, groin, genitals or anus.
* Some patients may get very sick and require hospitalization.
